

Google Ads API - Design Documentation

Blue Canvas AI Consultancy

1. Overview

Blue Canvas is an AI consultancy based in Northern Ireland. We are building an internal automated reporting and campaign management tool.

2. Purpose

Automated daily performance reporting (spend, clicks, impressions, CTR, CPC)

Keyword performance monitoring and optimisation recommendations

Campaign budget tracking and alerts

Search terms analysis for negative keyword management

Weekly and monthly performance summaries

3. Architecture

Client: Internal CLI tool running on a Mac Mini server

Authentication: OAuth 2.0 Desktop App flow with refresh token

Manager Account: 396-378-6948

Ad Account: 801-851-4760

API Version: v19

Frequency: Daily automated queries (1-2 API calls per day)

4. API Usage

We will use the following Google Ads API services:

GoogleAdsService.Search - Query campaign, ad group, keyword, and search term performance metrics

KeywordPlanService - Keyword research and planning for campaign expansion

5. Data Flow

1. Scheduled job runs daily at 5:00 PM GMT
2. Authenticates via OAuth2 refresh token
3. Queries campaign performance data via GAQL
4. Generates a human-readable performance summary
5. Delivers report to business owner via messaging platform

6. Rate Limiting

Expected API calls: 2-5 per day

Well within standard rate limits

No bulk operations or high-frequency polling

7. Data Handling

Performance data is used for internal reporting only

No customer PII is accessed or stored

No data is shared with third parties

Reports are generated for the account owner only

8. Security

OAuth credentials stored as environment variables on a secured server

Refresh tokens are not exposed in logs or reports

Access limited to a single manager account managing a single ad account

9. Contact

Company: Blue Canvas
